WHAT IS THE AQUAMARINE

AQUAMARINE - Inspired by mother nature and combined with the technology of science derives the creation of a *waterproof surface & core*; the platform of its DNA is a game changer on an international scale, the technological leader of choice when it comes to determining the type of waterproof flooring most suitable for any indoor application.

Without the use of any **PVC plastic composites** during manufacturing, which is commonly found in most alternative waterproof **Hybrid flooring products**.

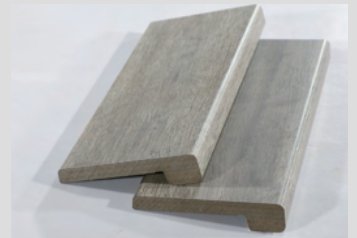

AQUAMARINE is an environmentally safe product as it is low in VOC' s (Volatile Organic Compounds) which meets the European Standards, who hold the most stringent guidelines internationally. An effortless and easily maintainable flooring solution, lifelike in appearance that sounds and feels like real timber underfoot.

This *waterproof surface & core laminate* flooring is as unique as science itself. What separates this high-performance durable laminate from all other surface only water resistance laminates' is that **AQUAMARINE HAS A WATERPROOF SURFACE & CORE WITH AN ADDITIONAL WATERPROOF HDF ECO-FRIENDLY WOODEN BASE**. As accidental liquid spills will occur, surely this clever *waterproof surface & core* would be the first and only choice when it comes flooring.
